WATSON DIESEL INC  
**WD-218 WING PLOW®**

If you attended our open house in April of this year, you got a sneak preview of our latest product, the **WD-218 F-550 Class Wing Plow**. This plow is the product of years of testing and research, resulting in a product we are proud of.

With the testing of our prototype finished, the first production units have been installed on Ford F-550 chassis.

The **WD-218** is the result of

- Studying the market
- Taking input from our customers that already run wing plows
- Developing a proprietary smart controller for ease of operation
- Use of all high quality sub components

with the end result being a wing plow that is worthy of being called *municipal quality*.

We offer the **WD-218** in either a self-contained electric over hydraulic model or central hydraulic model.

With the added plow lane width increased, along with the safety aspect of not having to run dangerously close to ditches, you will see the value in the use of a wing plow.

This unit is manufactured in our Canton, PA facility by our *attention to detail* fabricators. We are so sure of the quality of this product that we are backing it with an industry leading **2 SNOW SEASON WARRANTY**.

So, stop in today and let us show you why your next new truck or your existing truck should have a **WD-218 Wing Plow** on it. Or check out the new **WD-218** on our website or call for a demonstration at your shop.

***Watson Diesel Municipal where we are  
changing the way municipal business is done  
.... one truck at a time.***
